Sub C17 109
--12. A catch basin filter for use with a catch basin and a grate, the catch basin, including:

i) an inlet through which water and solids flow into the catch basin,

5 ii) an outlet through which water flows out of the catch basin, and

iii) basin sidewalls and the grate adapted to overlap the catch basin inlet, said catch basin filter comprising:

10 a) a filter bag adapted to be received in the catch basin for capturing the solids which enter the catch basin through the inlet, said bag having an open top adapted to be positioned at the catch basin inlet, a closed bottom and bag sidewalls, and

15 b) a plurality of elongated lift flaps joining the top of the bag and adapted to extend across the catch basin sidewalls at the catch basin inlet, loops defined in the flaps away from the bag and spaced openings in the loops; whereby portions of the flaps between the filter bag and the loops are
20 adapted to extend between the grate and the catch basin inlet so that the grate sandwiches the flaps in place against the catch basin and the flaps support the bag in the catch basin.

13. The catch basin filter of claim 12, including a plurality of lift rods of sufficient length to be extended into the loops in the flaps so that portions of the rods are exposed at the openings for attachment to lift members.

C

2
14. The catch basin filter of claim ~~12~~¹, wherein the catch basin is rectangular and the filter bag includes two pairs of opposed flaps.

3
15. The catch basin filter of claim ~~12~~¹, wherein the bag and flaps are formed from plastic fabric.

4
16. The catch basin filter as in claim ~~12~~¹, wherein the bag has a pair of narrow sidewalls and a pair of wide sidewalls and a pair of narrow flaps and a pair of wide flaps.

5
17. The catch basin filter as in claim ~~16~~², including a single opening in each narrow flap and a pair of openings in each wide flap.

6
18. The catch basin filter as in claim ~~12~~¹, wherein a recess is defined at the top of the catch basin, the recess adapted to support the grate.

7
19. The catch basin filter as in claim ~~12~~¹, wherein a recess is defined in the top of the catch basin, and the grate being adapted to seat in the recess for securing the flaps against the recess.

8
20. The catch basin filter as in claim ~~12~~¹, wherein the filter bag is formed of a woven material.

9
21. The catch basin filter of claim ~~20~~⁸, wherein the woven material is plastic.

10
22. A filter for use with a catch basin and a grate, the catch basin, including:

i) an inlet through which water and solids flow into the catch basin,

5
ii) an outlet through which water flows out of the catch basin, and

iii) a plurality of basin sidewalls, each sidewall having an upper end at the basin inlet and a recess located at said upper end, said sidewalls defining a chamber; and the grate
